MATLAB EXPO

From Control Theory to Practice: Addressing Misconceptions in Control Design

Workshop Handout

Getting Started

Please follow the steps below to get MATLAB Online setup on your end to follow the workshop along:

1. Click on the MATLAB trial license link and login into your MathWorks account (create one if you do not have one)

2. Click on the GitHub repository link for the workshop files
3. Navigate to the “Getting Started” section and click on

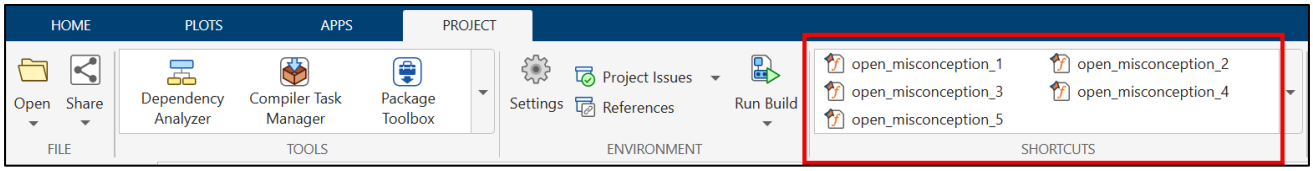

Following along

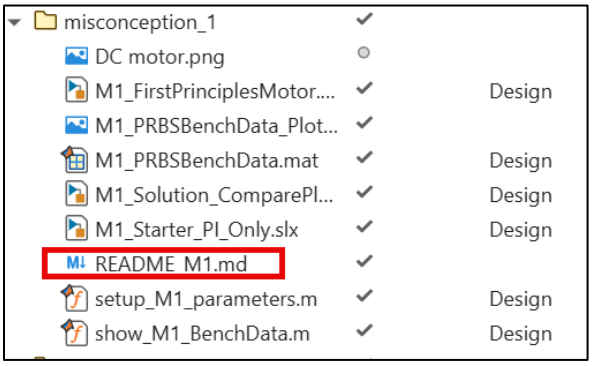

1. With MATLAB Online open, double click on the ‘ControlsMisconceptions.prj’ to launch the Simulink project file.

2. Please use the shortcuts in MATLAB to navigate through the exercises for each of the misconceptions

3. If you are following along at your own pace, please use the readme files under each misconception folder for guidance on going through the control design workflow.

4. Please find the slides shown in the workshop *(MATLAB Expo_FCTP_slides.pdf)* in the GitHub repository

Survey

At the end of the workshop, please fill in the survey to provide your feedback. There is also a section to **add your contact details if you require a call with MathWorks engineers to help with your control engineering learning, curriculum, and research priorities**.
